PROJECT DEFENCE
Face Recognition for Attendance
Management

Sagaf Youssouf
29 January, 2021

Outline

- Introduction
- Project objectives
- Methods and materials
 - System flow chart
 - Tools and libraries used
- Results
- Demo
- Conclusion

Introduction

- Recording manually attendance is time consuming;
- Student attendance and performance are correlated;
- World is turning toward automation using smart systems;

Project objectives

- Develop a computer-vision system to manage student attendance in classroom;
- Generate statistics of student attendance;
- Integrate the system with a GUI;

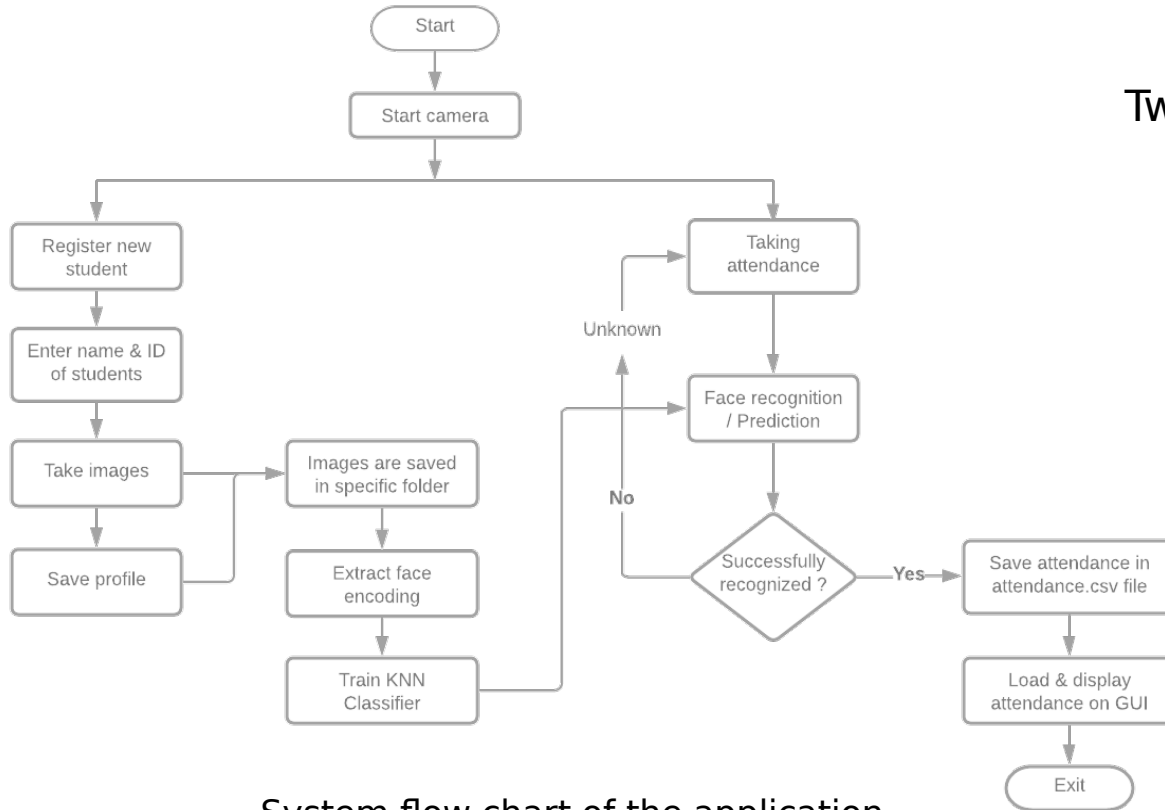

Project Diagram

System flow chart

Two parts :

- Registration flow part
- Recording attendance

System flow chart of the application

Tools and libraries used

- Programming language : Python
- Use of ***face_recognition*** library to extract face encoding;
- k-nearest-neighbors (KNN) algorithm for face recognition;
- PyQt5 to build graphical interface;
- And more libraries : scipy, OpenCV, Numpy, os, datetime, ...

Results

Graphical interface of the application

Conclusion

- Need to improve the code structure of the application for better performance;
- The project help me to master python programming and improve my coding skills in python using advanced concepts like multiprocessing and oop;

Thanks for your attention !
